Hinweise

- In principle, it is possible to operate the dimmer without connecting the neutral conductor, but some LED and CFLi light sources make the neutral conductor connection necessary to avoid flickering.
 - Operation without a neutral conductor increases the minimum load for light bulbs, HV halogen lamps, Tronic transformers and wound transformers to 50 W.
 - Electronic transformers and ballast devices for LED lamps can be operated with the dimming procedure specified by the manufacturer.
 - The switch-on brightness cannot be saved using a button.
 - The installation adapter mini housing is used for installation in false ceilings 5429 00.
 - If the ambient temperature is higher than 25 °C, the connected load must be reduced.
