Merkmale

- Active component for upgrading a Gira door communication system with an audio and video function.
- Range extension and increase of the number of devices when using additional control devices.
- Amplification of the audio and data signals for the door communication system in both directions.

Repeater mode

- Interconnects two line segments, to double both the number of devices in a video or audio door communication system and the cable range.
- Important: An additional control device is required to supply the second line segment.

Multi-conversation mode

- In multi-conversation mode, the complete system is subdivided into several lines (one main line, up to five ancillary lines) interconnected via the DCS repeater.
- Power is supplied to each line by its own control device.
- Up to five DCS repeaters can be used in one system in multi-conversation mode.
